Fleet Management Consulting

Fuel, maintenance, tire, and labor costs are the largest expenses that fleet operating companies incur. Proper cost control requires expertise in preventive maintenance, technician productivity, inventory control, warranty management and breakdown analysis.

With over thirty (30) years of proven success, **MCB Consulting** has significantly reduced fleet maintenance costs for all of its clients.

Our approach is simple:

1. **Identify opportunities to increase efficiency and lower cost**
2. **Define and remove physical and procedural obstacles**
3. **Develop sustainable and measurable solutions**
4. **Provide training during all phases of solutions implementation**
5. **Follow-up to ensure measurable savings have been achieved**

Profitability and service are directly dependant on how your company effectively manages their Fleet Maintenance Program.

For a detailed explanation of how **MCB Consulting** can help improve your fleet operations, please review our Services Menu on the back.
